

Infotainment Interface Design for Automobiles

Ian Buck

University of Minnesota, Morris

April 25, 2015

Infotainment Interface

- ▶ Infotainment
 - ▶ Information for work and play are accessed through the same devices
- ▶ Interface
 - ▶ How we interact with a device
 - ▶ Crucial to a user's satisfaction when using a device

Why Cars?

- ▶ Multiple-goal environment
- ▶ Safety is a very real concern
- ▶ Laws are not enough to prevent people from using infotainment devices while driving

Outline

User Interfaces

Testing Distracted Driving

Auditory Cues

Text-to-Speech and Voice Dictation

Air Gestures

Discussion

Touchscreens

- ▶ Found on many consumer electronics
 - ▶ Smartphones
 - ▶ Tablets
- ▶ Interactions
 - ▶ Tap
 - ▶ Swipe
 - ▶ Pinch-to-zoom
 - ▶ Long press

Voice Dictation

- ▶ Method of typing
- ▶ Speak your message aloud, and the computer transcribes it into text
- ▶ Allows user to look away from interface
- ▶ Often less accurate, harder to correct than physical typing

Screen Reading

- ▶ Augments visual interface to allow user to spend less time looking at the interface
- ▶ Often used to make interfaces accessible to the visually impaired
- ▶ Three types studied here:
 - ▶ Text-to-speech
 - ▶ Spindex
 - ▶ Spearcon

Air Gestures

- ▶ Sensors detect user's motions
- ▶ Some detect whole body (Microsoft Kinect)
- ▶ Some detect only hands (Leap Motion Controller)
- ▶ Very young interface category

Typical Setup

Eye Tracking

- ▶ Participant wears eye tracking glasses
- ▶ Gaze that falls on computer monitor counts as gaze time on primary task
- ▶ Gaze that falls anywhere else counts as gaze time on secondary task

Auditory Cues

- ▶ Gable et al.
- ▶ Goal: test affect of different auditory cues on gaze times
- ▶ Simulation: lane changing exercise
- ▶ Secondary task: find given song in list of 150
- ▶ 26 participants

Gaze Time Results

Other Results

- ▶ Deviation from ideal driving line: control was significantly less than all others
- ▶ Number of songs found and mistakes made similar for all search conditions
- ▶ Participants preferred Spindex+TTS over other search conditions

Text-to-Speech and Voice Dictation

- ▶ Truschin et al.
- ▶ Goal: improve upon existing speech interfaces
- ▶ Simulation: lane changing exercise
- ▶ Secondary task: listen and reply to email conversations
- ▶ 112 participants

Voice Condition

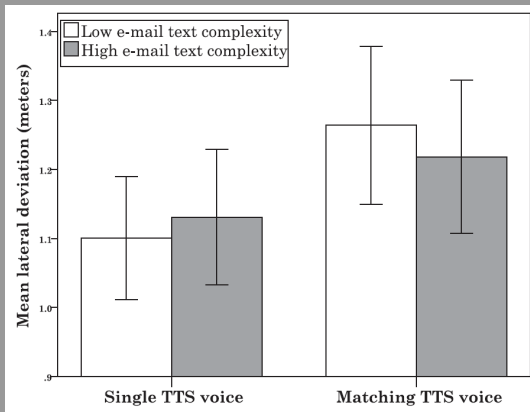

- ▶ Single voice for all participants in email thread OR
- ▶ Different voices for each participant in email thread
 - ▶ Voices matched by gender to sender
- ▶ Hypothesis: matched voices would improve driving performance and email comprehension

Emails

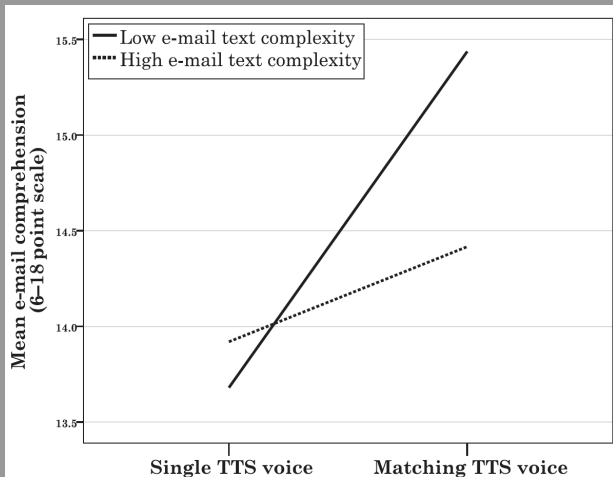

- ▶ Based on real-life conversations
- ▶ Low or high complexity
- ▶ Participants role-played when responding to messages
 - ▶ Given 6 facts about their character to memorize

Deviation from Ideal Driving Line Results

- ▶ No significant difference during listening phase
- ▶ Significant difference during responding phase:

Email Comprehension Results

Air Gestures

- ▶ May et al.
- ▶ Goal: compare performance of air gestures to that of touchscreens
- ▶ Simulation: car following exercise
- ▶ Secondary task: menu selections (1 to 4 sequential targets)
- ▶ 26 participants

The Interface

- ▶ Actions: scrolling, select current item, go back to previous menu
- ▶ Various audio cues
- ▶ Avoid unintended gestures

Results

- ▶ Deviation
 - ▶ Significantly higher for all search conditions than control
 - ▶ No significant difference between search conditions
- ▶ Efficiency: touchscreen was faster and fewer errors were made
- ▶ Participants preferred touchscreens

Discussion

- ▶ Auditory cues
 - ▶ Preferred by participants
 - ▶ Does allow user to look at road more
 - ▶ Few technological barriers
- ▶ Text-to-speech and voice dictation
 - ▶ Unclear if participants prefer it
 - ▶ Difficult to compare to touchscreen
 - ▶ Conceptually similar to telling passenger what to do with phone
 - ▶ Already available in many modern cars
- ▶ Air gestures
 - ▶ Not preferred by participants
 - ▶ Did not improve driving performance over touchscreens
 - ▶ Require more advanced technology
- ▶ None brought driving performance to control levels

Acknowledgements
