#### Introduction to error messages

- Mistakes happen a lot in programming
  - especially for new programmers
- Error messages produced from programming mistakes
- Tells the user information about the issue
- Here's an example of an error message (in Java):
  - -> denotes output

```
int three = 3;
System.out.print(tree);
-> error:
'tree' cannot be resolved to a variable
```

#### Importance of error messages

- Analyze error messages from usability perspective
- Error messages are important tool for beginner programmers
  - one of the primary interactions between the system and the user

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

- A good error message should:
  - convey the actual issue
  - help a student locate the issue
  - not add confusion
- Unhelpful error messages create frustration

Introduction	Background	Analyses 00000000000000	Methodologies	Conclusions	References
Outline					

### Background

- Compiler and runtime errors
- Dynamic and statically typed
- 2 Analyses of error messages
  - Analysis of Racket and DrRacket
  - Analysis of compiler errors
- 3 Methodologies for improving error messages
  - Recommendations for improving IDE error messages
  - Analysis of syntax error enhancement

## 4 Conclusions

Introduction Background Analyses Methodologies

Conclusions

References

## Outline

- Compiler and runtime errors
- Dynamic and statically typed
- 2 Analyses of error messages
- 3 Methodologies for improving error messages
- Conclusions

- Compiler: converts code to lower level language so instructions can be computed
- Compiler errors occur when code cannot be compiled due to errors
- Program will not execute
- For newer programmers, these typically occur from syntax errors

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

• Example (in Java):

```
int seven = (2 + 5;
```

```
-> error: ')' expected
```

- Runtime error occurs after a program has compiled, during execution of the program
- Dependent on values that may not be known at compile time
- Usually indication of logical errors in the code
- Example:

```
String theString = "hello";
int low = 3;
int high = 6;
System.out.print(theString.substring(low,high));
```

-> java.lang.StringIndexOutOfBoundsException: String index out of range: 6

Background

Analyses

Methodologies

onclusions

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

References

## Statically typed languages

- Variables assigned types
- Type checking done at compile time
- Following code would give compile time error

```
String personName = "Frank";
personName = 7;
```

Background

Analyses

Methodologies

onclusions

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

References

## Dynamically typed languages

- Variables are not assigned to types
- Type checking done at runtime
- Following would give runtime error

```
var x = "Frank";
var y = 7;
x - y;
```

KEY: %bad: Percentage of error messages of the given error category that were poorly responded to #bad: Estimate of the number of errors that were responded poorly to (AvgErrTotal \* %error \* %bad)

## Student edit example

#### • Missing parentheses before cond on line 2

#### • Same error message produced for each edit

```
(define (string-one-of? check-for-match stringOne stringTwo stringThree)
   cond [(and (string=? check-for-match stringOne))]
         [(and (string=? check-for-match stringTwo))])
     define: expected only one expression for the function body, but
found at least one extra part
(define (string-one-of? check-for-match stringOne stringTwo stringThree)
   cond [(string=? check-for-match stringOne)]
         [(and (string=? check-for-match stringTwo))]
         [(and (string=? check-for-match stringThree))])
(define (string-one-of? check-for-match stringOne stringTwo stringThree)
   cond [and ((string=? check-for-match stringOne))]
         [(and (string=? check-for-match stringTwo))]
         [(and (string=? check-for-match stringThree))])
Marceau et al
```

```
Introduction Background Analyses Methodologies Conclusions References
```

### Student edit example continued

```
(define (string-one-of? check-for-match stringOne stringTwo stringThree)
    cond [(string=? check-for-match stringOne)]
        [(string=? check-for-match stringTwo)]
        [(string=? check-for-match stringThree)])
(define (string-one-of? check-for-match stringOne stringTwo stringThree)
```

```
cond [(string=? check-for-match)]
```

```
[(string=? check-for-match stringTwo)]
```

```
[(string=? check-for-match stringThree)])
```

Marceau et al.

#### Student did not fix error

#### Fixed code:

```
(define (string-one-of? check-for-match stringOne stringTwo stringThree)
  (cond [(string=? check-for-match)]
       [(string=? check-for-match stringTwo)]
       [(string=? check-for-match stringThree)]))
```

## Analysis of compiler errors

- Students struggle with compiler error messages in course taught by V. Javier Traver at Jaume I University
- Traver interested in finding compiler error messages students struggled with
- Conducted study in Fall 2010
  - course used C++ programming language
- Study from a strictly usability perspective
  - did not consider technical constraints

 C++: Programming language not designed to be taught in intro course

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

- Imperative language: uses memory manipulation and state-changing statements
- Statically-typed
- Syntax example:

```
int a = 2;
a = a + 2;
cout << a << endl;</pre>
```

ackground

## Method of study

- GNU g++ compiler used
- Erroneous student code gathered from semester
- Analyzed each message:
  - why the error occurred
  - possible alternative error message
  - why the error message is unhelpful

Introduction Background Analyses Methodologies Conclusions References

## Example of code analyzed

Offending code (missing curly brace):

```
1 SavingAccount::SavingAccount(){
2 float SavingAccount::getInterestRate(){
3 return rate;
4 }
```

#### Error message:

In method 'SavingAccount::SavingAccount()':
declaration of

'float SavingAccount::getInterestRate()'
outside of class is not definition

Background

Analyses

Methodologies

onclusions

## Syntax error

Erroneous code:

if (score < 0) || (score > 100)

-> Syntax error on token "||", if expected

Background

Analyses

Methodologies

Conclusions

References

## Enhanced syntax error example

It appears that there is an error in the condition below:

```
if (score < 0) || (score > 100)
```

Remember that the condition for an if statement must be surrounded by opening and closing parentheses:

if (condition)

This is true even if the condition consists of more than one boolean expression combined with logical operators like && or [].

Denny et al.	Incorrect Code	Correct Code
Example	<pre>int a = 6; double x = 9.4; if (x &gt; 10) &amp;&amp; (a == 0) { return true; }</pre>	<pre>int a = 6; double x = 9.4; if ((x &gt; 10) &amp;&amp; (a == 0)) { return true; }</pre>
Explanatio	The condition of an if statement nee Even if the condition is made up of the entire thing still needs to be wra	the combination of other conditions,

#### Testing the enhanced syntax messages

- Students from course in control group (original error messages) and intervention group (enhanced error messages)
- Compared attempts of student submissions
- Used t-tests to find results
  - t-test: finds if there is statistically significant difference between two data groups

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

#### Results of syntax enhancement

t-tests gave high p-values (p > 0.05)

- indication of no evidence of statistically significant difference
- note: not all tests shown
- this test compares longest consecutive failing submissions

Exercise	µControl	µEnhanced	p-value
1	9.72	6.74	0.25
2	2.05	3.68	0.08
3	9.65	8.79	0.89
4	4.46	6.24	0.25
5	5.73	6.35	0.73
6	3.83	3.44	0.77
7	4.63	5.16	0.72
8	2.14	1.69	0.70

Introduction	Background	Analyses	Methodologies
000	0000	00000000000000	000000000000

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

#### Future work

- Denny et al. believed several factors were the cause for no significance
  - may not have paid attention to additional information
  - examples not relevant to student code
- Hope to apply additional research into their messages

Introduction	Background	Analyses	Methodologies
000	0000	0000000000000	0000000000

Conclusions

## Outline

#### Conclusions 4

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □
